Dublin

October 6.

1856 -

Respected Sir -

I have advised my
patient Mrs. O'ne to
place herself under
your care. She is
going to. Yours, and
she intends to remain
there during the
winter season -

Her case is one of
great nervous debility
she suffers from
neurasthenia - I am

in hopes that up to the
present time she is
not the subject of
organic disease. I
think she has suffered
from the effects of our
humid climate and
I trust that the more
dry and clear air of
France and your kind
treatment will restore
her to health =

Thirty Years have passed

Since I sent the card from
York in Sept. the 18th -

I am glad to hear from
my friend Miss Smith
who is a resident in
Mass. that you continue
in the enjoyment of the
blessings of health: your
name is never mentioned
in this household unless
in a bad way -

I beg to subscribe myself
Yours most faithfully

William Stokes -
Regius Professor of Physic. Dublin -
